Trans. of Fette Seifen Anstrichmittel (West Germany)

DESCRIPTORS: *Fats, *Margarine, Milk fat, Crystals
lattices, Binders, Processing.

The crystal-lattices of the fat-crystals are mainly responsible for the consistency of shortenings and margarines. The forces which bind the crystals in lattices can be divided into two main groups: (1) The primary irreversible and (2) the secondary reversible binding forces. Rheological measurements before and after the treatment of the fat or margarine give an idea of the structure of the material. (Author)

DESCRIPTORS: *Manganese, *Zinc, *Ferrites,
Temperature, Permeability, Oxides.

In manganese-zinc ferrites with an excess of iron oxide
one frequently finds a second maximum in the tempera-
ture course of the initial permeability. In most cases,
a secondary effect in the initial permeability is joined
with it. Both phenomena depend very strongly on the
magnitude of the iron-oxide excess, and can be influ-
enced by the sintering temperature and atmosphere. It
